

# Portable Sensor Light

9 white, ultra-bright low energy LEDs

Portable light; carry or hang

Sensor turns light on when dark and senses motion

Uses AA batteries or mains power (AC adaptor and batteries included)

A battery operated, portable sensor light ideal for use in and around the home, or when travelling. Pocket sized light functions as both movement activated or manual light.

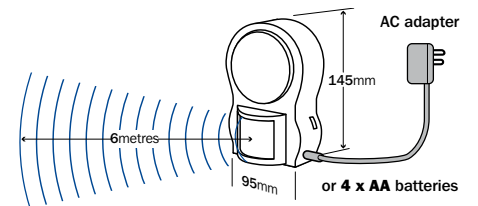

Powered by battery or the AC adapter, this light can be used as an infrared motion activated light or set to manual for continuous lighting.

When set to AUTO, the light automatically turns on in the dark when movement is detected, and remains on for 20 seconds if no further movement is detected.

Sensitive up to 6 metres with a 90° angle it can be mounted on any surface using the mounting kit and rear hanging hole.

Alternatively switch the light to ON for continuous operation, as a stationary night light or portable torch.

Uses the latest technology with 9 white ultra-bright, low energy consumption LEDs that require no bulb replacement. 4 x AA batteries allows it to be used anywhere.
