LED Sensor Night Light USB

The LED Sensor Night Light USB offers several benefits, primarily providing low-level illumination during night time hours.

Safety

Night lights can help prevent accidents and injuries by providing enough light to navigate through your home in the dark without stumbling over objects or tripping on stairs.

Emergency Illumination

In case of a power outage or emergencies, night lights can be a reliable source of low-level illumination, helping you find your way around and locate essential items like flashlights.

Hallway and Bathroom Lighting

Installing night lights in hallways and bathrooms can be practical, as it prevents the need to turn on bright lights when you need to use these spaces at night.

Promotes Sleep

The right type of night light with warm lighting can help create a sleep-conducive environment.

Specifications

Height	148mm
Width	50mm
Depth	31mm
Weight (torch)	120g

Features

- Lightweight and portable
- **Multiple lighting modes:** Continuous ambient light with five brightness levels, Automatic Sensing (5m sensor range), SOS Flash mode
- **Base:** Place on any flat surface or wall mount using included adhesive tape
- **Energy Efficient LED:** Built-in 2000mAh rechargeable battery can provide over 80 hours of continuous operation
- USB charging connection (included)

Optional

- USB power adaptor white (ELC-PWR-SUP-USB-WH)
